

# PP BURNER

The PP series of gas burners are pre-packaged, fan assisted units designed to suit virtually all industrial gas fired applications. The short flame produced makes the burner ideal for applications where chamber length is restricted. This burner range has been successfully applied in many industries including food, textiles, steel, plastics, paper and pulp. The compact dimensions of the PP burner and its short flame allows the plant designer a high degree of flexibility in its application.

## Typical Applications

- Printing and Coating Lines
- Injection Moulding
- Industrial Dryers
- Box Ovens
- Air Heaters

## Technical Feature

- Turndown Ratio : 30:1
- Capacity : 150kW to 2100kW
- Fuel Types : Suitable for operation on most gaseous fuels.
